Can election results be explained, given that each ballot reflects the influence of countless impressions, decisions, and attachments? Leading young scholars of political behaviour piece together a comprehensive portrait of the modern Canadian voter to reveal the challenges of understanding election results. By systematically exploring the long-standing attachments, short-term influences, and proximate factors that influence our behaviour in the voting booth, this theoretically grounded and methodologically advanced collection sheds new light on the choices we make as citizens and provides important insights into recent national developments. Bridging current theory with practical applications, the 'toolkit' combines conceptual models with concrete examples and useful

exercises to dramatically improve the knowledge, skills, and abilities of students in creating effective change. The Second Edition: - Takes a pragmatic, action-oriented approach - Emphasizes the measurement of change - Demonstrates principles and applications using real-world examples, exercises and cases. - Offers an integrated organizational change model so students can see the connections between topics and chapters. This brief paperback text gives students more depth and breadth of practical tools to practice their management skills than any other textbook. This edition continues its fresh approach to management coverage through current and relevant examples, updated theory, and a new pedagogically sound design. Glazov shows that the strategy of accommodation, the main difference between Canadian and American Soviet policy, was ultimately vindicated by the eventual ascendancy of a liberal Soviet leader (Gorbachev), which led to increased East-West contact and Soviet liberalization, phenomena that led directly to the West's victory in the Cold War. Glazov's new assessment of Western policies toward Khrushchev's Russia is critical to our understanding of present-day Russia, since Gorbachev's democratization, which led to the disintegration of the Soviet Union in 1991, had its origins in the Khrushchev thaw. Canadian Policy toward Khrushchev's Soviet Union provides vital information to help answer the question of how the West should deal with Russia, especially in the context of globalization - one of the most urgent issues facing Canada and the Western world. Pearson FlexText ...setting you up for success in school and at work Regardless of the course you're taking -- whether you are in a Business, Practical Nursing, ECE, or Police Foundations program -- you want to leave with skills that can help you get the job you want. Some of these skills will be

specific to your course of study or major. These are basic skills your employers will want you to have. An accountant, for example, will be expected to know how to read a balance sheet and use Microsoft Excel. But there are other skills essential to your success in the workplace that might not seem so obvious but are important enough that the many governments call them "Essential" Employability Skills. The Conference Board of Canada goes even further, calling them "the skills you need to enter, stay in, and progress in the world of work -- whether you work on your own or as a part of a team." In 1991, the Government of Canada ratified the United Nations Convention on the Rights of the Child, requiring governments at all levels to ensure that Canadian laws and practices safeguard the rights of children. A Question of Commitment: Children's Rights in Canada is the first book to assess the extent to which Canada has fulfilled this commitment. The editors, R. Brian Howe and Katherine Covell, contend that Canada has wavered in its commitment to the rights of children and is ambivalent in the political culture about the principle of children's rights. A Question of Commitment expands the scope of the editors' earlier book, The Challenge of Children's Rights for Canada, by including the voices of specialists in particular fields of children's rights and by incorporating recent developments.

Fully updated throughout, Thinking Government, fourth edition, is perfect for Canadian public administration courses."-- A generation of Canadian historians has viewed the mid-twentieth century as an era when Canada gave ground to the United States in most areas of foreign trade policy. In Dancing around the Elephant, Bruce Muirhead elegantly and cogently disputes this view. Drawing on extensive archival research, Muirhead notes

a number of cases where Canadian policy makers actually got the better of their American counterparts, such as the Auto Pact, and examines contextual reasons for the pessimistic view of Canada's trade position and hostile scepticism of American dominance: the rise of Canadian nationalism, the growth of anti-Americanism (based largely on the American role in Vietnam), and the election of Pierre Elliot Trudeau as prime minister in 1968. Muirhead also dispels the myth that the poor relationship between Prime Minister John Diefenbaker and President John F. Kennedy served to wreak havoc on Canadian-American relations, clearly demonstrating its lack of effect on trade patterns. While not disregarding a number of trade failures - particularly with the United Kingdom and Europe - *Dancing around the Elephant* refutes the position of those who question Canada's economic independence in the mid-century and will prove tremendously controversial with economic historians and those who study Canadian nationalism. This book explores three interwoven and challenging areas of research and development for future ICT-enabled applications: software intensive systems, complex systems and intelligent systems. Software intensive systems are systems that extensively interact with other systems, sensors, actuators, devices and users. More and more domains are now employing software intensive systems, e.g. the automotive sector, telecommunication systems, embedded systems in general, industrial automation systems and business applications. Moreover, the outcome of web services offers a new platform for enabling software intensive systems. Complex systems research is focused on the overall understanding of systems rather than their components. Complex systems are very much characterized by the changing environments in which they operate through their multiple internal and external interactions. They evolve and adapt through (internal and external) dynamic interactions. The development of intelligent systems and agents, which is increasingly characterized by the use of ontologies, can be beneficial for software intensive systems and complex systems alike. Accordingly, recent research in the areas of intelligent systems, robotics, neuroscience, artificial intelligence, and the cognitive sciences is essential to the future development of software intensive and complex systems. In *Pearson and Canada's Role in Nuclear Disarmament and Arms Control Negotiations* Joseph Levitt traces the history of these negotiations from the Canadian diplomatic perspective. He analyses the various proposals and documents the reactions of Pearson and his colleagues. Levitt reveals Pearson's own view of the strategic stalemate between the USSR and the United States -- Pearson did not believe that an open and liberal society such as the United States would ever launch an unprovoked offensive on the USSR; he thought instead that the danger of a major military confrontation arose only from the possibility that the Soviet

Union might attack. Consequently the main thrust of Canadian diplomatic activity in these negotiations was not prevention of an American arms build-up but support of a strategy which would compel the USSR to accept an agreement that would benefit the Americans militarily or, failing that, to hold the Soviets responsible for the impasse in the talks and thus win the all-important propaganda war. In his 2 terms as prime minister, from 1963–1968, Lester B. Pearson oversaw the revamping of Canada through the introduction of Medicare, the Canada Pension Plan, the Commission on Bilingualism and Biculturalism, the Auto Pact, and the new Maple Leaf flag. Pearson came to power after an impressive career as a diplomat, where he played a vital role in the creation of NATO and the United Nations, later serving as president of its General Assembly. He put Canada on the world stage when he won the 1957 Nobel Peace Prize for his handling of the Suez Crisis, during which he brokered the formation of a UN peacekeeping force. Author Andrew Cohen, whose books have focused on Canada's place in the world, is the perfect author to assess Pearson's legacy.
