Analysis and Methods for Improvement of Safety at High-Speed Rural Intersections Apr 25 2020 Since 2006, INDOT has been preparing an annual five-percent report that identifies intersections and segments on Indiana state roads that require attention due to the excessive number and severity of crashes. Many of the identified intersections are two-way, stop-controlled intersections located on high-speed, multi-lane, rural roads. Some contributing design and human factors have been identified while other factors still await investigation. Multivariate ordered probit models have been developed to help identify additional factors of the frequency and severity of crashes. These models can estimate how much different

factors increase the frequency of crashes at several levels of injury severity (fatal/incapacitating, non-incapacitating/ possible, property-damage-only). They have a unique ability to account for unobserved but common conditions that affect all of the crash severity levels. Recommendations for safety countermeasures are made based on both of these research results and our study of published reports of other authors.

Presumed Incompetent Aug 10 2021 Presumed Incompetent is a pathbreaking account of the intersecting roles of race, gender, and class in the working lives of women faculty of color. Through personal narratives and qualitative empirical studies, more than 40 authors expose the daunting challenges faced by academic women of color as they navigate the often hostile terrain of higher education, including hiring, promotion, tenure, and relations with students, colleagues, and administrators. The narratives are filled with wit, wisdom, and concrete recommendations, and provide a window into the struggles of professional women in a racially stratified but increasingly multicultural America.

Normality and Disability Mar 05 2021 Hotly contested, normality remains a powerful, complex category in contemporary law and culture. What is little realized are the ways in which disability underpins and shapes the operation of norms and the power dynamics of normalization. This pioneering collection explores the place of law in political, social, scientific and biomedical developments relating to disability and other categories of 'abnormality'. The contributors show how law produces cultural meanings, norms, representations, artefacts and expressions of disability, abnormality and normality, as well as how law responds to and is constituted by cultures of disability. The collection traverses a range of contemporary legal and political issues including human rights, mercy killing, reproductive technologies, hate crime, policing, immigration and disability housing. It also explores the impact and ongoing legacies of historical practices such as eugenics and deinstitutionalization. Of interest to a wide range of scholars working on normality and law, the book also creates an opening for critical scholars and activists engaged with other marginalized and denigrated categories, notably contesting institutional violence in the context of settler colonialism, neoliberalism and imperialism, to engage more richly and politically with disability. This book was originally published as a special issue of the Continuum journal.

Gendered Power and Mobile Technology Jul 09 2021 Mobile phones are widely viewed as the information and communication technology that holds the most promise for bridging global digital divides. Gendered Power and Mobile

Technology uses empirical research to focus on changing intersections between technology, gender and other categories of social and cultural power difference (such as age, race, class, and ethnicity) in the use of mobile communication technologies. Asking how these intersections can inform development discourse, practice, and research, this volume seeks to rectify the lack of attention to the Global South, calling for more sensitivity to the contexts and consequences of mobile phone use. Indeed, drawing on case studies from Ecuador, Ghana, Kenya, Mexico, Peru, Tanzania, and Uganda, this book engages with the intersectionality paradigm to tease out the complexities of using mobile technologies for development purposes. Gendered Power and Mobile Technology will appeal to students and researchers interested in fields such as media studies, development studies, gender and technology, feminist technoscience, anthropology, and sociology.

Race, Class, and Gender Mar 25 2020 Timely, relevant and extremely student-friendly, Andersen/Hill Collins' RACE, CLASS, AND GENDER: INTERSECTIONS AND INEQUALITIES, 10th edition, equips you with a multidimensional perspective on today's social issues. Written by two leading authorities in the field, this classic anthology uses a diverse collection of writings by a variety of scholars to demonstrate how the complex intersection of people's race, class, gender and sexuality shapes their experiences in U.S. society. Professors Andersen and Hill Collins begin each section with in-depth introductions to provide an analytical framework for understanding social inequality. Completely up-to-date, the readings cover current--and often controversial topics--including undocumented students, myths about immigrant crime, growing inequality, the role of social media in social movement mobilization, health care inequality and more.

Learning in the Collisions Aug 22 2022 The paradigm for my study had to shift from a flat, two dimensional either/or dichotomy into a three (or more) dimensional sphere to embody the variety of women's stories about Chaco Canyon. When the methodology for the study shifted, the 'voice' of the canyon shifted as well. the significance of this study is that it challenged the Anglo voice which speaks for a non-Anglo space. It challenged a hegemonic history where one voice (i.e., white, male, economically privileged, heterosexual) speaks for all. the study took the dominant voice out of the center and made it one of many voices, thus creating a model for the rewriting of histories in other places. the study identified differences beyond simply male/female, moving me from an exclusive Western feminist view to an inclusive Third World feminist perspective.

Emerging Intersections Oct 24 2022 The United States is known as a "melting pot"

yet this mix tends to be volatile and contributes to a long history of oppression, racism, and bigotry. Emerging Intersections, an anthology of ten previously unpublished essays, looks at the problems of inequality and oppression from new angles and promotes intersectionality as an interpretive tool that can be utilized to better understand the ways in which race, class, gender, ethnicity, and other dimensions of difference shape our lives today. The book showcases innovative contributions that expand our understanding of how inequality affects people of color, demonstrates the ways public policies reinforce existing systems of inequality, and shows how research and teaching using an intersectional perspective compels scholars to become agents of change within institutions. By offering practical applications for using intersectional knowledge, Emerging Intersections will help bring us one step closer to achieving positive institutional change and social justice.

Intersections of Identity and Sexual Violence on Campus May 27 2020 While sexual violence has been present and prevalent on campus for decades, the work of recent college student activists has made it an issue of major societal and institutional concern. This book makes an important contribution to and provides a foundation for better contextualizing and understanding sexual violence. Each chapter in this edited volume focuses on populations that are not often centered in the discourse of campus sexual violence and accounts for individuals' intersecting identities and how they interlock with larger systems of domination. Challenging dominant ideologies concerning assumptions of white women as the only victims-survivors, the racialization of aggressors, and the deleterious rape myths present in both research and practice, this book draws attention to the complexities of sexual violence on the college campus by highlighting populations that are frequently invisible in research, reporting, and practice. The book places sexual violence on campus in a historical context, centering the experiences of populations relegated to the margins, and highlighting the relationship between racism, classism, homophobia, transphobia, and other forms of domination to sexual violence. The final chapters of the book explore how critical models of intervention and prevention and a critical analysis of existing institutional policies may be implemented across college campuses to better address sexual violence for multiple populations and identities in higher education. This book will expand educators' understanding of sexual violence to inform more effective policies, procedures, practice, and research that reaches beyond preventing sexual violence and addresses the dominant systems from which sexual violence stems, in an attempt to eradicate, not just prevent, the act and the issue.

The Practice of U.S. Women's History Jun 27 2020 In the last several decades, U.S. women's history has come of age. Not only have historians challenged the national narrative on the basis of their rich explorations of the personal, the social, the economic, and the political, but they have also entered into dialogues with each other over the meaning of women's history itself. In this collection of seventeen original essays on women's lives from the colonial period to the present, contributors take the competing forces of race, gender, class, sexuality, religion, and region into account. Among many other examples, they examine how conceptions of gender shaped government officials' attitudes towards East Asian immigrants; how race and gender inequality pervaded the welfare state; and how color and class shaped Mexican American women's mobilization for civil and labor rights.

The Intersections of Whiteness Sep 11 2021 Bringing together scholars from different disciplines in the United States, the United Kingdom, South Africa, and Germany, these essays form a transnational dialogue that strongly argues that whiteness needs to be rigorously examined if its hegemonic effects are to be dissolved.

Street Rider's Guide Dec 22 2019 A completely revised and updated edition of David Hough's successful book Street Strategies, the all-new Street Rider's Guide spells out safety tactics for motorcycle riders looking to get the most out of their favorite hobby; for as long as possible. Covering topics from A to Z, Street Rider's Guide is the new go-to handbook for motorcyclists who want quick solutions to nearly 100 commonly encountered obstacles and road challenges, what safety experts like Hough call increasing a rider's "situational awareness." As Hough writes in the introduction, ";the most important way to avoiding crashes is to figure out what's happening." While many books exist on the market for riders looking to improve their ride or get better control of their bikes, no book out there is dedicated to helping riders develop their situational awareness, which is the most critical skill a rider can have. INSIDE STREET RIDER'S GUIDE Alphabetically arranged topics from "Alley Acumen" to "Zone Woes" Short descriptions of over 80 critical situations selected by the author Expert tips about how to recognize oncoming hazards and how to avoid them Each entry accompanied by a color photograph to illustrate real-life situation

Intersections of Value Feb 22 2020 Intersections of Value investigates the universal human need for aesthetic experience. It examines three appreciative contexts where aesthetic value plays a central role: art, nature, and the everyday.

However, no important appreciative context or practice is completely centered on a single value. Hence, the book explores the way the aesthetic interacts with moral, cognitive, and functional values in these contexts. The account of aesthetic appreciation is complemented by analyses of the cognitive and ethical value of art, the connection between environmental ethics and aesthetics, and the degree to which the aesthetic value of everyday artefacts derives from their basic practical functions. Robert Stecker devotes special attention to art as an appreciative context because it is an especially rich arena where different values interact. There is an important connection between artistic value and aesthetic value, but it is a mistake to reduce the former to the latter. Rather, artistic value should be seen as complex and pluralistic, composed not only of aesthetic but also ethical, cognitive, and art-historical values.

Intersections of Gender, Race, and Class Jul 21 2022 This incisive, accessible collection of readings is arranged to highlight and underscore some of the most intriguing and cutting-edge thinking on the discussion of gender, race, and class. While other anthologies often separate race, class, and gender into distinct components, this anthology frames each reading within an analysis of all three cultural forces. Additionally, the intersection of sexuality with gender, race, and class is highlighted throughout the text. A collection of work by both U.S. and international writers, the text begins with a historical section that brings the past into contemporary focus. Section Two features personal narratives that make research and theoretical material immediately relevant to students. Other sections address family and community relationships, institutions, privilege, activism, and new sociological perspectives. Brief introductions frame each reading, and discussion questions spark student interest and enhance their understanding of the material.

T.S. Eliot, Lancelot Andrewes, and the Word: Intersections of Literature and Christianity Sep 30 2020 With special attention to the poems For Lancelot Andrewes, Journey of the Magi, and Ash-Wednesday, G. Douglas Atkins offers an exciting new analysis of T.S. Eliot's debt to the seventeenth-century churchman Lancelot Andrewes and his theories of reading and writing texts.

Re-Imagining the Other Jan 03 2021 The twenty-first century exploded into the global imagination with unforgettable scenes of death and destruction. An apocalyptic 'clash of civilizations' seemed to be waged between two old foes - 'the West' and 'Islam.' However, the decade-long and ruinous 'war on terror' has prompted re-assessments of the militaristic approach to Western-Muslim relations. A growing number of academics, policymakers, religious leaders, journalists, and

activists view the struggles as resulting from a 'clash of ignorance.' Re-imagining the Other examines the ways in which knowledge is manipulated by dominant Western and Muslim discourses. Authors from several disciplines study how the two societies have constructed images of each other in historical and contemporary times. The complexities and subtleties of their mutually productive relationship are overshadowed by portrayals of unremitting clash, thus serving as encouragement for the promotion of war and terrorism. The book proposes specific approaches to re-imagine the Other in order to mitigate Western-Muslim conflict.

Intersections of Formal and Informal Science Nov 13 2021 Science learning that takes place between and at the intersections of formal and informal science environments has not been systematically reviewed to offer a comprehensive understanding of the existing knowledge base. Bringing together theory and research, this volume describes the various ways in which learning science in various settings has been conceptualized as well as empirical evidence to illustrate how science learning in these settings can be supported.

Ecofeminism: Feminist Intersections with Other Animals and the Earth Jan 27 2023 Leading feminist scholars and activists as well as new voices introduce and explore themes central to contemporary ecofeminism. Ecofeminism: Feminist Intersections with Other Animals and the Earth first offers an historical, grounding overview that situates ecofeminist theory and activism and provides a timeline for important publications and events. This is followed by contributions from leading theorists and activists on how our emotions and embodiment can and must inform our relationships with the more than human world. In the final section, the contributors explore the complexities of appreciating difference and the possibilities of living less violently. Throughout the book, the authors engage with intersections of gender and gender non-conformity, race, sexuality, disability, and species. The result is a new up-to-date resource for students and teachers of animal studies, environmental studies, feminist/gender studies, and practical ethics.

Traffic Engineering Handbook Nov 20 2019 Get a complete look into modern traffic engineering solutions Traffic Engineering Handbook, Seventh Edition is a newly revised text that builds upon the reputation as the go-to source of essential traffic engineering solutions that this book has maintained for the past 70 years. The updated content reflects changes in key industry standards, and shines a spotlight on the needs of all users, the design of context-sensitive roadways, and the development of more sustainable transportation solutions. Additionally, this resource features a new organizational structure that promotes a more functionally-driven, multimodal approach to planning, designing, and implementing

transportation solutions. A branch of civil engineering, traffic engineering concerns the safe and efficient movement of people and goods along roadways. Traffic flow, road geometry, sidewalks, crosswalks, cycle facilities, shared lane markings, traffic signs, traffic lights, and more—all of these elements must be considered when designing public and private sector transportation solutions. Explore the fundamental concepts of traffic engineering as they relate to operation, design, and management Access updated content that reflects changes in key industry-leading resources, such as the Highway Capacity Manual (HCM), Manual on Uniform Traffic Control Devices (MUTCD), AASHTO Policy on Geometric Design, Highway Safety Manual (HSM), and Americans with Disabilities Act Understand the current state of the traffic engineering field Leverage revised information that homes in on the key topics most relevant to traffic engineering in today's world, such as context-sensitive roadways and sustainable transportation solutions Traffic Engineering Handbook, Seventh Edition is an essential text for public and private sector transportation practitioners, transportation decision makers, public officials, and even upper-level undergraduate and graduate students who are studying transportation engineering.

The Intersections of Whiteness Dec 02 2020 Trumpism and the racially implied Islamophobia of the "travel ban"; Brexit and the yearning for Britain's past imperial grandeur; Black Lives Matter; the public backlash against Merkel's refugee policies in Germany. These seemingly national responses to the changing demographics in a multitude of Western nations need to be understood as effects of a global/transnational crisis of whiteness. *The Intersections of Whiteness* brings together scholars from different disciplines to shed light on these manifestations in the United States, the United Kingdom, South Africa and Germany. Applying methodology stemming from critical race theory's investment in intersectionality, the contributions of this edited collection focus on specific intersections of whiteness with gender, class, space, affect and nationality. Offering valuable insights into the contours of whiteness and its instrumentalisation across different nations, societies and cultures, this incisive volume creates transnational dialogue and will appeal to students and researchers interested in fields such as critical whiteness and race studies, gender studies, cultural studies and social policy.

Topics in Intersection Graph Theory Dec 14 2021 Finally there is a book that presents real applications of graph theory in a unified format. This book is the only source for an extended, concentrated focus on the theory and techniques common to various types of intersection graphs. It is a concise treatment of the aspects of intersection graphs that interconnect many standard concepts and form the

foundation of a surprising array of applications to biology, computing, psychology, matrices, and statistics. The authors emphasize the underlying tools and techniques and demonstrate how this approach constitutes a definite theory within graph theory. Some of the applications are not widely known or available in the graph theoretic literature and are presented here for the first time. The book also includes a detailed literature guide for many specialized and related areas, a current bibliography, and more than 100 exercises.

Intersectionallies Jan 15 2022 A handy book about intersectionality that depicts the nuances of identity and embraces difference as a source of community.

Living at the Intersections Dec 26 2022 *Living at the Intersections: Social Identities and Black Collegians* brings together 21 diverse authors from 14 different institutions, including our nation's most prestigious public and private universities, to advance the use of intersectionality and intersectional approaches in studying Black students in higher education. Chapters cover a diversity of topics, ranging from spirituality to sexuality and masculinity, from Black students at HBCUs to those in STEM majors, and a host of issues related to race, class, gender, and other identities. Authors draw upon a wealth of data including national surveys, interviews, focus groups, narratives, and even historical research. A smooth blend of anthropology, historiography, psychology, sociology, and intersectional approaches from multiple disciplines, this book breaks new ground on the "who, what, when, where, and how" of intersectionality applied to social problems affecting Black collegians. The authors go beyond merely stating the importance of intersectionality in research, but they also provide countless

examples, recommended strategies, and tools for doing so. This book is an important resource for higher education and student affairs professionals, scholars, and graduate students interested in intersectionality and Black collegians.

Gender, Race and Religion Jun 08 2021 *Gender, Race and Religion* brings together a selection of original papers published in *Ethnic and Racial Studies* that address the intersections between gender relations, race and religion in our contemporary environment. Chapters address both theoretical and empirical aspects of this phenomenon, and although written from the perspective of quite different national, social and political situations, they are linked by a common concern to analyze the interface between gender and other situated social relationships, from both a conceptual and a policy angle. These are issues that have been the subject of intense scholarly research and analysis in recent years, as well as forming part of public debates about the significance of gender, race and religion as sites of identity formation and mobilization in our changing global environment. The substantive chapters bring together insights from both theoretical reflection and empirical research in order to investigate particular facets of these questions. *Gender, Race and Religion* addresses issues that are at the heart of contemporary scholarly debates in the field of race and ethnic studies, and engages with important questions in policy and public debates. This book was originally published as a special issue of *Ethnic and Racial Studies*.

Safety and Operational Impacts of Alternative Intersections Apr 06 2021 As the degradation of service at some conventional intersections increases, there becomes a need for alternative solutions other than expensive interchanges. Under certain traffic and local conditions some alternative intersections are more promising than other solutions. In some cases, the conventional intersection may still be the optimal choice. The presented research focused on developing guidelines that would help planners and designers identify the most promising solutions for further analysis. Although a large number of sources could be found on the research subject, the existing knowledge about performance of alternative intersection design is incomplete. Only a few designs proposed in the past have been applied at a considerable number of locations; other types still await implementation. The available sources are not comprehensive and deal with conditions that might be different from Indiana. The knowledge of the safety impact of these intersections is very limited. A large number of more than 1,300 scenarios were simulated runs performed with VISSIM calibrated to Indiana conditions. The simulated types of intersections included: conventional, roundabouts, jag-handle near-sided and far-

sided, median U-turns, and continuous-flow intersection. Except roundabouts, all intersections were signalized to test their capacity limits and delay-based performance. The presented research developed guidelines for using alternative intersection designs. The guidelines compile the existing knowledge found in existing publications and research reports with the simulation experiments performed with VISSIM. The guidelines are ready to use and will help planners and designers determine which intersection types are the most promising under considered conditions and should be considered in a detailed way.

Engaging the Other Apr 18 2022 Addressing the specific contexts of communal leadership, educational policy, inter-communal relations, legal reform, media production, public discourse, public opinion, and responses to government policy, this volume examines Western-Muslim relations and makes proposals for enhancing Self-Other interaction to improve societal harmony.

Ecofeminism, Second Edition Feb 28 2023 This new edition of Ecofeminism: Feminist Intersections with Other Animals and the Earth begins with an historical, grounding overview that situates ecofeminist theory and activism within the larger field of ecocriticism and provides a timeline for important publications and events. Throughout the book, authors engage with intersections of gender, sexuality, gender expression, race, disability, and species to address the various ways that sexism, heteronormativity, racism, colonialism, and ableism are informed by and support animal oppression. This collection is broken down into three separate sections: -Affect includes contributions from leading theorists and activists on how our emotions and embodiment can and must inform our relationships with the more-than-human world -Context explores the complexities of appreciating difference and the possibilities of living less violently -Climate, new to the second edition, provides an overview of our climate crisis as well as the climate for critical discussion and debate about ecofeminist ideas and actions Drawing on animal studies, environmental studies, feminist/gender studies, and practical ethics, the ecofeminist contributors to this volume stress the need to move beyond binaries and attend to context over universal judgments; spotlight the importance of care as well as justice, emotion as well as reason; and work to undo the logic of domination and its material implications.

The Oxen at the Intersection May 07 2021 When Green Mountain College in Poultney, Vermont, announced that two oxen called Bill and Lou would be killed and turned into hamburgers despite their years of service as unofficial college and town mascots, patrice jones and her colleagues at nearby VINE Sanctuary offered an alternative scenario: to allow the elderly bovines to retire to the sanctuary.

*What transpired after this simple offer was a catastrophe of miscommunication, misdirection, and misinterpretations, as the college dug in its heels, activists piled on, and social media erupted. Part true-crime mystery, part on-the-ground reportage, and part sociocultural critique, *The Oxen at the Intersection* is a brilliant unearthing of the assumptions, preconceptions, and biases that led all concerned with the lives and deaths of these two animals to fail to achieve their ends. How and why the threads of this story unspooled, as Jones reveals, raises profound questions—most particularly about how ideas rooted in history, race, gender, region, and speciesism intersect and complicate strategy and activism, and their desired outcomes. In the end, notes Jones, we must always ask, Where's the body?*

Psychology at the Intersections of Gender, Feminism, History, and Culture Feb 16 2022 *Psychologies of women and gender have developed - both institutionally and intellectually - within distinct social, cultural, historical, and political contexts. In many cases, feminism has played an important role in catalyzing disciplinary engagements with gender and culture as categories of analysis and sites of theorizing rather than solely as variables defining groups to be compared. The intersections of gender, feminism, history, and culture are explored with reference to psychology, first in the United States, and then across three other national contexts. This exploration reveals the similarities and tensions between and among the approaches to studying culture and the approaches to studying gender, that psychologists have employed. It also reveals the historically - and culturally - contingent nature of psychologies of women and gender, and, by extension, of gender itself.*

Emerging Intersections Sep 23 2022 *The United States is known as a melting pot yet this mix tends to be volatile and contributes to a long history of oppression, racism, and bigotry. *Emerging Intersections*, an anthology of ten previously unpublished essays, looks at the problems of inequality and oppression from new angles and promotes intersectionality as an interpretive tool that can be utilized to better understand the ways in which race, class, gender, ethnicity, and other dimensions of difference shape our lives today. The book showcases innovative contributions that expand our understanding of how inequality affects people of color, demonstrates the ways public policies reinforce existing systems of inequality, and shows how research and teaching using an intersectional perspective compels scholars to become agents of change within institutions. By offering practical applications for using intersectional knowledge, *Emerging Intersections* will help bring us one step closer to achieving positive institutional*

change and social justice.

Intersections of Privilege and Otherness in Counselling and Psychotherapy Mar 17 2022 *Intersections of Privilege and Otherness in Counselling and Psychotherapy* presents an in-depth understanding of the role of privilege, and of the unconscious experience of privilege and difference within the world of counselling and psychotherapy. To address the absence of the exploration of the unconscious experience of privilege within counselling and psychotherapy, the book not only presents an exploration of intersectional difference, but also discusses the deeper unconscious understanding of difference, and how privilege plays a role in the construction of otherness. It does so by utilising material from both within the world of psychotherapy, and from the fields of post-colonial theory, feminist discourse, and other theoretical areas of relevance. The book also offers an exploration and understanding of intersectionality and how this impacts upon our conscious and unconscious exploration of privilege and otherness. With theoretically underpinned, and inherently practical psychotherapeutic case studies, this book will serve as a guidebook for counsellors and psychotherapists.

Random Walk Intersections Oct 20 2019 The material covered in this book involves important and non-trivial results in contemporary probability theory motivated by polymer models, as well as other topics of importance in physics and chemistry. The development carefully provides the basic definitions of mutual intersection and self-intersection local times for Brownian motions and the accompanying large deviation results. The book then proceeds to the analogues of these concepts and results for random walks on lattices of \mathbb{R}^d . This includes suitable integrability and large deviation results for these models and some applications. Moreover, the notes and comments at the end of the chapters provide interesting remarks and references to various related results, as well as a good number of exercises. The author provides a beautiful development of these subtle topics at a level accessible to advanced graduate students.

Intersections of Religion and Migration Nov 01 2020 This innovative volume introduces readers to a variety of disciplinary and methodological approaches used to examine the intersections of religion and migration. A range of leading figures in this field consider the roles of religion throughout various types of migration,

including forced, voluntary, and economic. They discuss examples of migrations at all levels, from local to global, and critically examine case studies from various regional contexts across the globe. The book grapples with the linkages and feedback between religion and migration, exploring immigrant congregations, activism among and between religious groups, and innovations in religious thought in light of migration experiences, among other themes. The contributors demonstrate that religion is an important factor in migration studies and that attention to the intersection between religion and migration augments and enriches our understandings of religion. Ultimately, this volume provides a crucial survey of a burgeoning cross-disciplinary, interreligious, and global area of study.

Understanding the Intersections of Race, Gender, and Gifted Education Oct 12 2021 This book seeks to understand the complexities of talented and high-performing Black girls and women in STEM across the P-20 trajectory. Analogously, this volume aims to understand the intersections between giftedness, its identification, and racial, gender, and academic discipline identities. The dearth of literature on this subject suggests that Black girls and women have unique experiences in gifted programming, in large part because of factors associated with gifted programs in general. Key factors affecting Black students, and Black girls in particular, are identification and underrepresentation. These factors can be shaped by interlocking systems of racism, classism, gender bias, and other forms of oppression. Teachers in the P-12 educational system are the first identifiers for gifted programming and look for student characteristics, such as natural leadership, inquisitiveness, and students' desire to be in gifted programs. Because many Black girls are stereotyped and teachers rarely have deep understanding of cultural differences, Black girls are less likely to be identified for gifted programming. More specifically, Black girls' lack of representation in gifted mathematics or STEM programs contradicts research that finds that girls reach several developmental advantages ahead of boys. For example, research has shown that girls talk and read earlier, receive higher grades in elementary school, and drop-out less often than boys. Other studies have also shown that Black girls have higher mathematics career aspirations than their White and Latina female peers; yet, they are rarely represented in gifted math and Advanced Placement (AP) math programs. Furthermore, the underrepresentation of urban, low-income African-American students in gifted education is related to low test scores, student and family choice, a lack of teacher referral, and a mismatch between home and school cultures. Some high-performing Black girls and women are participating in programs that nurture and support their racial and gender identities and contribute

to them developing into strong and efficacious girls and women who have agency in their lives. This anthology includes studies that illustrate the complexities of intersectionality in various STEM programs, while also demonstrating that increasing access to STEM for Black girls and women is doable.

The Classification of Quadrilaterals Feb 04 2021 This monograph reports on an analysis of a small part of the mathematics curriculum, the definitions given to quadrilaterals. This kind of research, which we call micro-curricular analysis, is often undertaken by those who create curriculum, but it is not usually done systematically and it is rarely published. Many terms in mathematics education can be found to have different definitions in mathematics books. Among these are “natural number,” “parallel lines” and “congruent triangles,” “trapezoid” and “isosceles trapezoid,” the formal definitions of the trigonometric functions and absolute value, and implicit definitions of the arithmetic operations addition, subtraction, multiplication, and division. Yet many teachers and students do not realize there is a choice of definitions for mathematical terms. And even those who realize there is a choice may not know who decides which definition of any mathematical term is better, and under what criteria. Finally, rarely are the mathematical implications of various choices discussed. As a result, many students misuse and otherwise do not understand the role of definition in mathematics. We have chosen in this monograph to examine a bit of mathematics for its definitions: the quadrilaterals. We do so because there is some disagreement in the definitions and, consequently, in the ways in which quadrilaterals are classified and relate to each other. The issues underlying these differences have engaged students, teachers, mathematics educators, and mathematicians. There have been several articles and a number of essays on the definitions and classification of quadrilaterals. But primarily we chose this specific area of definition in mathematics because it demonstrates how broad mathematical issues revolving around definitions become reflected in curricular materials. While we were undertaking this research, we found that the area of quadrilaterals supplied grist for broader and richer discussions than we had first anticipated. The intended audience includes curriculum developers, researchers, teachers, teacher trainers, and anyone interested in language and its use.
