The Brain: A User's Manual Jan 29 2023 "Congratulations on the purchase of this exclusive product, tailor-made just for you. It will provide you with years of continuous service." The brain is one of nature's most miraculous but misunderstood creations. With wit and style, Marco Magrini cuts through the noise of cerebral misinformation to tell the real story of who you are and, crucially, what you are capable of achieving. N.B. Product comes with a 10-year warranty. T&Cs apply "A fantastically original and clever way to popularise neuroscience." - Professor Gilberto Corbellini, Philosophy of Science, La Sapienza University, Rome "In these pages, Magrini describes beautifully, and often very humorously, the extraordinary harvest of new neuroscientific discoveries shedding light on the most complex and astonishing thing in the universe itself." - Tomaso Poggio, MIT McGovern Institute

The News: A User's Manual Aug 24 2022 The news is everywhere. We can't stop constantly checking it on our computer screens, but what is this doing to our minds? We are never really taught how to make sense of the torrent of news we face every day, writes Alain de Botton (author of the best-selling *The Architecture of Happiness*), but this has a huge impact on our sense of what matters and of how we should lead our lives. In his dazzling new book, de Botton takes twenty-five archetypal news stories—including an airplane crash, a murder, a celebrity interview and a political scandal—and submits them to unusually intense analysis with a view to helping us navigate our news-soaked age. He raises such questions as Why are disaster stories often so uplifting? What makes the love lives of celebrities so interesting? Why do we enjoy watching politicians being brought down? Why are upheavals in far-off lands often so boring? In *The News: A User's Manual*, de Botton has written the ultimate guide for our frenzied era, certain to bring calm, understanding and a measure of sanity to our daily (perhaps even hourly) interactions with the news machine. (With black-and-white illustrations throughout.)

User's Manual for the Calm Learning-machine Simulation

Program Oct 02 2020 The CALM (Collected Algorithms for Learning Machines) program system is a means of implementing a wide class of learning machines on a digital computer. A learning machine is a trainable pattern classifier, built around an array of adaptive logic elements, that categorizes patterns on the basis of its past experience. The CALM system provides a framework for learning-machine simulation largely independent of the computer used and the types of patterns being classified. The actions performed by CALM include training a learning machine on a set of patterns, testing the classification error rate of the trained machine on the same or an independent set of patterns, and modifying, saving, and restoring the machine's memory and control parameters. The report is a user's manual for CALM, and specifically for the CALM system implementation for the General Electric 635 computer. The report covers the nature of the learning machines realized by CALM, the CALM program itself, and the use of CALM in learning-machine experimentation. (Author).
